• Bahrain (Open to relocate)

Cover Letter

Dear Hiring Manager,

I am a Software Developer with over **4 years of experience** building scalable backend and full-stack systems using **Java**, **Spring Boot**, **Microservices**, **REST**, **GraphQL**, **PostgreSQL**, **Redis**, **AWS**, **GCP**, **Docker**, and **Kubernetes**. I specialize in designing clean, efficient, and maintainable architectures that support high-performance applications in cloud-native environments.

In my current role, I develop distributed services and **high-quality APIs**, achieving measurable improvements such as a **25% increase in API performance** and delivering reliable backend modules integrated with AWS services such as **Lambda**, **SQS**, and **SES**. At my previous organization, I contributed to large-scale telecom and e-commerce platforms, supporting major feature launches, modernizing legacy systems, implementing **CI/CD pipelines**, and improving system stability and performance.

I enjoy working in engineering teams that prioritize **clean code**, **automation**, **scalable architecture**, and continuous improvement. I am open to opportunities across **Europe**, including relocation, and I look forward to contributing to impactful, technology-driven projects.

Thank you for reviewing my application. I would welcome the chance to further discuss how my experience aligns with your team's needs.

Kind regards,
Atchuth Yashwanth Kosuru
